

## Your Image Just Got MUCH Better: The New iTOM-CAT iPad-based Scanning System

By **Howell Schorr, CEO,**  
**Comfort Fit Labs**

Back in 2009 **ComfortFit Labs** introduced the latest and greatest in-office scanning technology: the Tom-Cat foot scanner. The original Tom-Cat units provided thousands of successful and accurate

scans. Now, here we are only 8 years later with yet another breakthrough that uses proven Apple products quality and technology to *easily* and *perfectly* scan the patient's feet for orthotics, diabetic custom and OTC insoles, shoe sizing and ankle and leg for the lab's Stabilizer Brace and Richie Brace products.

ComfortFit, along with its long-term technology partner

TOM-CAT Solutions, is now offering the biggest breakthrough in foot and ankle scanning technology to date. This is a "full solution" that has integrated all hardware and software into a single, easy-to-use, full-function scanning system. This new iTOM-CAT is an iPad Air 2-based system using the ComfortFit prescription form. With a push of a button the images are captured and all of the data and forms are sent to the lab in just seconds. No e-mailing, no faxing, no complications; just scan the feet, complete the prescription form and send the data (in-office Wi-Fi is required). You now have a complete digital history of your patient's scanned data and prescription form. Imaging of the feet using the iTOM-CAT is that quick and that easy!

The system uses a structured 3-D image that has the accuracy of less than 0.2mm. Other benefits of this new system include:

- FULL and concise US-based technical/administrative support
- No need for brace "Central Casting" since there is no doubt about scan accuracy; no need to have a brace casting expert on staff
- The entire process is quick and easy with no mess, no casting supplies to buy and store

- Improves accuracy, saves office time and reduces the door-to-door turnaround time
- Permanent office record scan of patient's data.
- Paperless prescription form that can be updated electronically when necessary
- Needs to be calibrated only one time (before initial installation)
- HIPAA-compliant Software
- Use your own iPad or purchase it from ComfortFit
  - No scan fees, no hidden fees
  - Lifetime cast storage
  - Easy to learn (videos available on

the lab's website)

- Ability to alter cast information based on patient's precise needs

ComfortFit Labs is proud to be a TOM-CAT partner and provide podiatry with this new compact, fast, accurate, reliable, clean and "simple-to-use" technology. If you would like additional information or the lab's iTOM-CAT videos or any other product offerings, please contact their office and ask for Tom Calagna (888.523.1600) or Howie Schorr (888.362.2021).

ComfortFit Orthotic Labs, Inc. now celebrating its 18th year and still America's fastest growing orthotic lab.

*"The iTOM-CAT scanner has been the greatest innovation I have seen in 20 years. This incredible technology using an iPad and a small camera attached to it enables us to perform a 3-D digital scan of a person's foot and ankle. We have been using this device for way over a year to make custom orthotics. The orthotics we have been dispensing have been far superior to other casting methods. We are now starting to use the iTOM-CAT scanner for Richie braces. The ease of use and accurate results are amazing."*
